LIGHTING

HALOGEN PAR BULB 05048

PAR or parabolic aluminum reflector lamps are electric lamps that illuminate a limited area. They can be used for spotlights, spot and directional lighting, as well as a wide range of industrial, commercial, residential and business applications. They can be used as lights, on runways as landing lights and in residential and commercial buildings as recessed lights. Thanks to their ability to highlight specific areas, they are also very popular for use on stage, in stores to highlight products, and in homes and offices where built-in light sources give a modern look.
